

ABSTRACT  
NOVEL MYCOBACTERIAL INHIBITORS

- 5 The present invention relates to novel substituted quinoline derivatives according to the general Formula (Ia) or the general Formula (Ib)

- the pharmaceutically acceptable acid or base addition salts thereof, the quaternary amines thereof, the stereochemically isomeric forms thereof, the tautomeric forms thereof and the *N*-oxide forms thereof. The claimed compounds are useful for the treatment of mycobacterial diseases. In particular, compounds are claimed in which, independently from each other,  $R^1$  is halo;  $p=1$ ;  $R^2$  is optionally substituted alkyloxy,

alkyl, Ar, Het, or a radical of formula ;  $R^3$  is optionally substituted Ar or Het;  $q=1$ ,  $R^4$  and  $R^5$  each independently are alkyl;  $R^6$  is hydrogen or a radical of

- 15 formula ;  $r$  is equal to 0 or 1 and  $R^7$  is hydrogen or Ar. Also claimed is a composition comprising a pharmaceutically acceptable carrier and, as active ingredient, a therapeutically effective amount of the claimed compounds, the use of the claimed compounds or compositions for the manufacture of a medicament for the treatment of mycobacterial diseases and a process for preparing the claimed compounds.
